# Enjoy your outdoor lifestyle all year round

**Whether spring, summer, autumn or winter, the 12-Volt outdoor lighting from Garden Lights allows you to enjoy your garden until late into the night.**

Outdoor lighting plays a major role in the design of a garden. With outdoor lighting, you can be creative in combining atmosphere and functionality. Garden Lights has a wide range of fixtures that will suit all tastes and budgets, whether you want to enjoy beautiful wall lighting or shine a spotlight on a hedge or shrub. With some spotlights, or decking with built-in lights, there is a solution out there for every tree, shrub or decking!

Outdoor lighting is used for various different functions. Of course, we often talk about creating a visually appealing garden, but lighting can also be functional. Are you tired of returning home in the evening to a dark pathway leading to your front door? Illuminate the path using beautiful post lights. These are also really important for safety reasons.

## Advantages 12 volt system

- **Very easy to install yourself**
- **It is not necessary to bury cables**
- **Safe for people and animals**
- **Easy to expand**

**Garden  
Lights**

# Easy installation

## 1. Choice of lighting

Within our wide product range, you select the fixtures with which you want to attractively illuminate your garden, driveway, fence, or pond.

See page 14-33.

## 2. Choice of transformer

The total wattage of your chosen lighting determines the wattage of the required transformer. Add up the number of watts of the lights + accessories. You can then choose a 24, 60 or 150-watt transformer. Tip: always provide some extra space in terms of wattage if you choose to add a light or accessory in the future. See page 36.

## 3. Choice of main cables

You can then start working with the main cable; 2 types of systems are available:

1. The main cable **With** connectors at fixed points. This cable is available in 10 and 15 meters.
2. The flex main cable **Without** fixed connectors. Within the separate Flex connectors, you can choose where to connect the light to the main cable. This cable is available in 10, 25 and 50 meters.

Optionally, you can expand the system with a cable divider, an extension cable and other accessories.

See page 37.

## Choose your main cable

### System 1 (fixed)

The main cable with connectors at fixed points. This cable is available in 10 and 15 meters.

This main cable has fixed connectors on the cable. You can choose the main cable of 10 meters with 4 connection points or the main cable of 15 meters with 6 connection points. The lights' cable has a male plug that you simply connect to the fixed connector on the main cable.

### System 2 (flex)

The Flex main cable without fixed connectors. This cable is available in 10, 25 and 50 meters.

The connectors are separately available.

With the Flex main cables you can decide for yourself where you want to connect the lights on the cable. You simply place the female Flex connector on the cable wherever you want. Open the connector, insert the cable and close the cover. Then connect the lights' cable to the female Flex connector. The Flex main cable is available in 10, 25 and 50 meters.

# Make your garden Smart

Meet Garden Lights Plus

With Garden Lights Plus, you can make your 12-volt garden lighting system smart, whether you own a Garden Lights system already, or just want to install a new system.

Most of the time, warm white light is all you need, but at other moments, a colour might fit better. With the option to select various colours and warm white, you can choose the right ambience for your garden. Really like your current colour setting? Save the scene so you can activate it whenever you want.

Becoming even smarter

Lights+

# SMART

Make your garden smart today with the Switch Garden Lights Plus and choose from the following two options:

## Option 1

### Switch

Transform your 12-volt system into a smart system with one simple addition: the Switch Plus. Place the Switch Plus between the transformer and the light or group of lights. Then download the app, link the Switch to the app, and you are ready to control your outdoor lighting from your smartphone.

#### The benefits of the Smart Switch Plus

- + make your entire system or a part of it smart;
- + set different timers simultaneously;
- + set the built-in dark/light sensor;
- + create different zones.

## Option 2

### Smart lights

Would you like to control your lights separately, dim them, or change the colour of them? Then use smart light bulbs. Our smart lights are easy to install. Place them where you want in your garden, connect them to the 12-volt system, and then link the lights to the Garden Lights app. You're now ready to set the lights.

#### The benefits of the Smart Plus lights

- + control lights separately;
- + determine the colour of the light;
- + dim the light intensity;
- + set different timers simultaneously;
- + create different zones;
- + save your favorite settings as a scene.
